EC Declaration of Conformity

according to EC Machines Directive 2006/42/EC, Appendix II A

We herewith declare that the design and construction of the machines named below, and the versions of it that we have introduced into the market, conform to the fundamental safety and health requirements of EC Directive 98/37/EC.

This declaration is invalidated when changes which were not agreed to by us are made to the machines.

Manufacturer: Thermo Electron LED GmbH
Stockland 3
56412 Niederelbert, Germany

Description of the machine:

Function: Ultrapure water system

Versions: MicroPure standard, MicroPure UF, MicroPure UV/UF, MicroPure UV

Article numbers: 50132366, 50132368, 50132370, 50132373

We also declare that the machine complies with the following further appropriate Guidelines/Directives:

EMV Directive (2004/108/EC)

Harmonized Standards applied:

DIN EN ISO 12100-1 Safety of machines, Part 1: Principles
DIN EN ISO 12100-2 Safety of machines, Part 2: Technical Guidelines
DIN EN ISO 14121-1 Safety of machines, Part 1: Risk assessment
DIN EN 61326-1

Person authorized for documentation:

Detlef Opp

Niederelbert, 1 April 2010

Detlef Opp, Head of Technical Documentation

Signature

Preface

Dear Sir or Madam

In deciding to purchase an ultrapure water system from the MicroPure series, you have selected a high-quality product.

Thank you for the confidence you have placed in us.

Before you start to install and work with your MicroPure system, please carefully read the information that is given in these operating instructions on how it is to be installed and operated.

This is particularly important as we, the manufacturer, cannot accept liability for any damage occurring as a result of incorrect operation of the system or from use of it for other than the specified purpose.

Niederelbert, 01.04.2010

2. Explanatory notes on the operating instructions

EU Mark of Conformity

CSA - admission

Important operating and/or maintenance instructions! Read the operating instructions with due care.

Risk of electric shock! Electrical work on the system is only to be carried out by qualified personnel.

General information! Particularly important notes are marked with this information sign.

Protective conductor connection

Connect the power supply to an electrical socket with a protective connection.

The information provided in these operating instructions is only valid for the system which has the serial number which is to be entered on the front page.

Please enter the serial number* of your MicroPure system in the space provided on the front page.

* Read the serial number of your ultrapure water system from the type plate.

For quick and correct service, please include the following information on all inquiries and replacement parts orders which relate to your system:

- The serial number
- The article number

3. Transport and packaging

Ultrapure water systems are carefully controlled and packed prior to dispatch, but damage could still possibly occur during transport. Carrying the system by hand is always to be by two people. Do not throw or tip the system.

3.1 Examination on receipt

- Check the completeness of the goods received against the delivery note.

Does the packaging show signs of damage?

- Inspect the system for damage.

3.2 Complaints

Should damage have occurred to the goods during transport:

- Immediately contact the post, railway or forwarding agent *.
- Save the complete packaging, including the cardboard box, for a possible inspection of them and/or return shipment of the system.

3.3 Packing for return shipment

If possible, use the original box and packaging material.

When these are no longer available, then:

- Protect the system from shock by packing it in a suitable bag or sheet and a strong cardboard box.

* **The time limit for claims is 6 days from the time of receipt of the goods. The right to claim for damages ceases when this time has elapsed.**

4. Extent of delivery

MicroPure ultrapure water system versions with performances of up to 1.5 l/min are available as follows:

50132366	MicroPure Standard	(Standard system)
50132368	MicroPure UF	(Standard system + Ultrafiltration module)
50132370	MicroPure UV/UF	(Standard system + UV-Photooxidation + Ultrafiltration module)
50132373	MicroPure UV	(Standard system + UV-Photooxidation)

(Please check that your system corresponds to the article number given on the delivery note.)

1x MicroPure (according to version)	Article no. 5013xxxx
together with an assembly kit , consisting of:	
Filter cartridge	Article no. 09.1006
Sterile filter capsule, 0.2 µm	Article no. 09.1003
Feedwater connecting kit, R 3/4"	Article no. 25.0075
Rinse water hose, 8 mm o.d., 3 m	Article no. 18.0036
Operating instructions	Article no. 50133223
Tabletop power pack, 24 VDC	Article no. 50129629
Universal adapter	Article no. 21.1006
Universal holder	Article no. 21.1007
Connecting cord (rubber connector to nema plug connector)	Article no. 50132200
Connecting cord (rubber connector to british ST plug connector)	Article no. 50132203
Connecting cord (rubber connector to euro plug connector)	Article no. 50132215

5. Safety precautions

Observe these safety precautions for your own safety!

- Each system of the MicroPure series is a modern ultrapure through out water system, exclusively designed for the purification of tap water of drinking water quality.
- Please do not start to install and operate your system until you have read through the information given in these operating instructions.
- Please note that the manufacturer is freed from all liability when the system is used for other than the intended purpose and/or is improperly operated.
- Lifting and carrying the ultrapure water system, e.g. to the installation location, should be carried out by two people. To lift it, each takes hold of it under the base plate at two corners.
- The CE-mark is invalidated when constructional changes are made to the system or foreign products are installed in it.
- Protect the system from frost. The temperature at the installation area must be at least + 2°C.
- Observe all general rules and regulations that are valid at the installation location, including the current accident prevention regulations.
- The feedwater pressure must be min. 1 bar and max. 6 bar. An additional pressure reducer must be installed should it be higher.
- According to DIN EN 1717, water purification systems must be equipped with a device that safeguards the tap water against contamination.
- A suitable electric socket must be made available for the system (refer to Technical Specifications).
- The installation area must have a drain at floor level with at least DN 50 pipe and which allows free run off. Should no such drain be available, we recommend the installation of a water watcher (article no. 16.0129), otherwise the manufacturer will not accept any liability for water damage.
- When the system is to be wall-mounted, please previously check that the wall has a sufficient load-bearing capacity (refer to Technical Specifications for the weight). The ultrapure water system only be mounted on a concrete wall or a solid masonry.

- The maximum operating temperature of the system is 40°C.

- If neither a floor drain is not is available, then proceed as follows during longer system standstills (e.g. long holidays):
 - **Switch the system off (unplug the mains plug).**
 - **Shut off the supply of water to the ultrapure water system.**Do not re-start the system with the water supply still in the shut off condition, as the pump would then suffer damage. The manufacturer will not accept any liability should this occur.

- When installing the ultrapure water system, ensure that there is sufficient working room around it for problem-free operation of it as well as for filter replacement, checking connections etc.

- The guarantee is valid for a period of 12 months!

- Never look directly at a switched-on UV-lamp, because UV light endangers eyesight!
Never switch the UV-lamp on when is has been taken out of the metal cylinder!
Only authorized personnel are to carry out UV-lamp replacement.

6. Intended use

MicroPure ultrapure water systems are a reaction to actual user needs, the continually increasing requirements that water of ultrapure quality must fulfill, the increasingly strict demands resulting from technological advances and the need for user-friendly systems and complete solutions.

MicroPure systems have therefore been solely and specifically designed for the production of ultrapure water which is free of particles, salts and organic compounds and is sterile filtered.

- Analytical techniques in laboratories:

- HPLC (**H**igh **P**erformance **L**iquid **C**hromatography)
- IC (**I**on **C**hromatography)
- ICP (**I**nductive **C**oupled Argon **P**lasma)
- AAS (**A**tomically **A**bsorption **S**pectrophotometry)
- TOC Analysis (**T**otal **O**rganic **C**arbon)
- etc.

- Reagent and solution preparation:

- Cell culture media
- Tissue culture media

- Water for high-purity rinse processes on a laboratory scale

7. Technical specifications

Demands on the feedwater	
Source	Potable tap water pretreated by reverse osmosis, ion exchange or distillation.
Feedwater resistance	> 0.20 MΩxcm
Free chlorine	max. 0.05 ppm
TOC Value	max. 50 ppb
Turbidity	< 1.0 NTU
Carbon dioxide	max. 30 ppm
Silicate	max. 2 ppm
Pressure	0.1- 6 bar, A pressure reducer must be connected in series when the feedwater pressure is > 6 bar.
Temperature	+2 - +35 °C

Product water quality				
	Standard	UF	UV/UF	UV
Conductivity μS/cm	0.055	0.055	0.055	0.055
Resistance MΩxcm at 25°C	18.2	18.2	18.2	18.2
TOC ppb	5 - 10	5 - 10	1 - 5	1 - 5
Bacteria CFU/ml	< 1	< 1	< 1	< 1
Bacterial endotoxines EU/ml	--	0.001*	0.001*	--
Particles > 0.2 μm per ml	< 1	< 1	< 1	< 1
Flow rate L/min	1.5	1.0	1.0	1.5

* Contingent on the feedwater and disinfection!

Dimensions	
Height:	545 mm
Width:	305 mm
Depth:	300 mm
Weight:	
MicroPure Standard	approx. 17 kg
MicroPure UF	approx. 17 kg
MicroPure UV/UF	approx. 17 kg
MicroPure UV	approx. 17 kg

Water connectors	
Feedwater	Hose, 8 mm o.d./ R 3/4"
Rinse water	Hose, 8 mm o.d.

Cell constants of the measuring cells	
Feedwater conductivity	0.16 cm ⁻¹
Ultrapure water conductivity	0.01 cm ⁻¹

Electrical connections / external switched mode power supply	
Input voltage	AC 100 – 240 V, 50 – 60 Hz, 5 – 3.8 A
Output voltage	DC 24 V, 3.8 A
System connection	DC 24 V, 80 W
Potential-free contact	max. 30V, 2A
Protection Class	Class II (external SMPS certified as Class I)

Airborne sound emission	
Sound-pressure level	43 dB(A)

Ambient conditions (DIN EN 61010-1 (VDE 0411-1):2011-02)	
Usage	Indoor rooms
Height	Up to 2000 m
Temperature range	From 5° C to 40° C
Relative humidity	Maximum relative humidity 80 % at temperatures of up to 31° C, linearly decreasing to 50 % relative humidity at 40° C
Line-voltage variation	Not more than ± 10 % of the line voltage
Transient overvoltages	As usually occur in the supply network (overvoltage category II acc. to IEC 60364-4-443). <u>Note:</u> The rated level of transient overvoltage is the withstand impulse voltage acc. to overvoltage category II of IEC 60364-4-443
Ventilation requirements	There are no special requirements with regard to ventilation.
Degree of pollution	2

Parts which contact water	
Pump head	Nylon with glass fibre
UV-Lamp	High-purity synthetic quartz
UV Housing	Stainless steel
Filter cartridge	PP
UF Housing	Polycarbonate
Rinsing solenoid valve	PA
Pressure reducer	VA, EPDM
Dispensing valve	POM
Conductivity measuring cells	PVC, stainless steel
Connections	POM
Hoses	PE
O-Rings	EPDM
Sterile filter	PP, PE, PSU

8. How the versions function

MicroPure Standard, UF, UV/UF, UV

Tap water that has been pretreated by reverse osmosis, ion exchange or distillation flows through a pressure reducer and into the ultrapure water system, where the electric conductivity of it is monitored. A pump forces this feedwater through UV-photooxidation (only with MicroPure UV and MicroPure UV/UF) and a filter cartridge. Following this, the water is further pumped through an ultrafiltration module (only with MicroPure UF and MicroPure UV/UF) and on past a special conductivity measuring cell equipped with temperature compensation which continuously measures the conductivity. When treated water is dispensed, it flows through a sterile filter before exiting from the ultrapure water outlet. The water inside the system is recirculated at regular time intervals during the "Interval" mode.

8.1 Flow chart for MicroPure Standard

A-F1	Filter cartridge
A-F2	Sterile filter
A-P1	Circulation pump
QIA 300	Feedwater conductivity
QIA 303	Ultrapure water conductivity
TIA 500	Temperature sensor
V1	Pressure reducer
V2	Check valve
V3	Dispensing valve
V4	Solenoid rinsing valve

8.2 Flow chart for MicroPure UF

A-F1	Filter cartridge
A-F2	Sterile filter
A-F3	Ultrafiltration module
A-P1	Circulation pump
QIA 300	Feedwater conductivity
QIA 303	Ultrapure water conductivity
TIA 500	Temperature sensor
V1	Pressure reducer
V2	Check valve
V3	Dispensing valve
V4	Solenoid rinsing valve

8.3 Flow chart for MicroPure UV/UF

- A-F1 Filter cartridge
- A-F2 Sterile filter
- A-F3 Ultrafiltration module
- A-P1 Circulation pump
- A-UV1 UV-photooxidation
- QIA 300 Feedwater conductivity
- QIA 303 Ultrapure water conductivity
- TIA 500 Temperature sensor
- V1 Pressure reducer
- V2 Check valve
- V3 Dispensing valve
- V4 Solenoid rinsing valve

8.4 Flow chart for MicroPure UV

- A-F1 Filter cartridge
- A-F2 Sterile filter
- A-P1 Circulation pump
- A-UV1 UV-photooxidation
- QIA 300 Feedwater conductivity
- QIA 303 Ultrapure water conductivity
- TIA 500 Temperature sensor
- V1 Pressure reducer
- V2 Check valve
- V3 Dispensing valve
- V4 Solenoid rinsing valve

9. Installation of the system

9.1 Installation area

Take the following criteria into consideration when selecting the installation area:

- Feedwater pressure, not below 0.1 bar, not above 6 bar.

The feedwater pressure must not be allowed to go above 6 bar. Install an additional pressure reducer when the feedwater pressure is higher.

- Minimum temperature + 2°C.
- Level standing surface
- A smooth wall is required when the system is to be wall-mounted.
- The standing or wall surface must be strong enough to hold the system (for system weight, see "Technical Specifications")
- A floor drain with a DN 50 size (id 38.5 mm) waste pipe is required. When no such floor drain is available, install a water watcher (article no.: 16.0129) to guard against water damage!

Free gravity flow to drain must be ensured!

- An electric socket with protective conductor must be available for connection of the system to the voltage supply (see Technical specifications).

Position the system so that there is no difficulty in separating the device from the electric mains.

- There must be sufficient working space around the system (filter replacement etc.).
- The system must be easy to operate and check.
- An R 3/4" tap water connector is required.

9.2 Installation

Schwenkbares Display
Swivel display

Drehknopf zur Reinstwasserentnahme
Rotary knob for ultra pure water

Schnellverschlüsse Filterkartuschen
Quick connectors filter cartridge

- 1) Feedwater connector Hose, 8 mm od
- 2) Rinse water connector Hose, 8 mm od.
- 3) Connection power supply 4-pin 24V DC
- 4) Sterile filter
- 5) Filter cartridge

Proceed as follows to install and start your MicroPure ultrapure water system:

- Either stand the system on the intended surface or hang it on a wall using the wall-mount which is available as an accessory.
- Press the push-button of the cartridge cover to unlock the cover. Remove the cover.
- Remove the stoppers from the filter cartridge (5) which is supplied with the system and save them for possible return of the spent filter cartridge (only when it is to carry out waste disposal).
- Fit filter cartridge (5) in the free space at the back of the compartment, then plug the 2 quick-connect couplings onto the filter cartridge connections so that they audibly snap into position.
- Use the R3/4" feedwater hose kit to make connection to the feedwater connector (1).
- Position the dirt-trap sieve (from the hose kit) in the 3/4" threaded connector of the feedwater hose and screw this connector to the water tap which can be turned off.
- Use the 8 mm o.d. rinse water hose supplied to make a pressureless connection from the system (2) to the waste drain.
- When the sterile filter which is standardly supplied is to be put to use, screw it to the outlet of the dispensing valve (R 1/4" female thread).

- Open the water tap so that feedwater is supplied and check that all connections are leak-free.
- Replace the cartridge housing cover and ensure that the catch at the right of the cover locks into position.

9.3 Mounting the power pack (voltage supply)

Back view power supply

Universal adapter

Wall mount
with screws

- Whenever possible, mount the power pack on the wall to the left or right of the ultrapure water system where it is freely accessible.
- Stick the universal holder which is supplied in the assembly kit to the back of the power pack as shown in the above Figure.
- Stick the universal adapter to a smooth wall surface or screw it to the wall using the dowels and screws supplied in the assembly kit.
- When the universal holder and universal adapter have been fitted, hang the power pack in.
- Plug the connecting cable (appliance cable) in the power pack socket.
- Connect the power pack to the ultrapure water system (4-pin power supply connector, pos. 3).
- The system is now ready for use.

9.4 Wall mounting

Please use the wall-mount (article number 09.2212) to mount the system on a wall. Fasten it to the wall by means of three screws.

The screws and dowels are supplied with the wall mount, are exclusively to fix the wall mount to a concrete wall or a solid masonry!

When the wall-mount has been attached to the wall, hang the system on it by fitting the holes in the back of the system on the screws as shown below.

10. Putting the system into operation

Allow the system to warm up to, or to cool down to, room temperature before starting it up for the first time.

Check that all hose connections have been made as specified in the "Setting up the system" section.

Switch the system on by pressing this button. After a compulsory rinse the system switches to the last operating mode.

To vent air from the system, switch the system 3 times successively to "Rinsing" in the menu and collect and discard approx. 5 litres of water each time. The ultrapure water limiting value can be gone below during this procedure.

NONSTOP

Use this "NONSTOP"-key to switch the system to the "Nonstop" operating mode.

INTERVAL

You can set the system back to "Interval" operation when the system has brought the ultrapure water to the quality you require.

10.1 Venting the sterile filter

Vent the sterile filter by turning the milled screw anti-clockwise and closing it after all air has emerged, i.e. when no more ultrapure water flows out.

11. Operating elements

Switches the system on or off

NONSTOP

Switches "Nonstop" operation on or, in the menu, increases a value on display

Confirms the value shown in a menu point

Switches the menu to the next menu point

INTERVAL

Switches "Interval" operation on or, in the menu, decreases a value on display

Switches the UV-lamp on or, in the menu, allows you to select the position in a number that you wish to change

12. System control

General information

A press on the ON/OFF-key causes the system to run in the *Interval* operating mode (see Interval mode).

Interval operation then starts up automatically every 0.5 hours and runs for the set length of time to ensure the high ultrapure water quality.

The "UV" text message is displayed when the UV-lamp is on. The "TC" message is displayed when temperature compensation of measured values is active. In addition, the measured values of ultrapure water conductivity and temperature are displayed.

In the case of a fault, a fault message is given out across the potential-free output and the fault is shown in line 4 of the display. Should several faults occur simultaneously, then they are alternately displayed.

When the Nonstop-key is now pressed, the system switches to the *Nonstop* mode, the pump is started and the solenoid rinsing valve opens for the set rinsing time. *Nonstop* operation can be stopped by pressing the Interval-key. After a wait of 2 hours, the system switches itself back to the Interval mode.

A press on the UV-key brings "UV" to display, but the UV-lamp is only switched on when the system is in the Nonstop mode and switches itself off when Nonstop mode is ended (2 h). When Nonstop operation is manually stopped by a press on the Interval-key, however, the UV-lamp is not switched off until it has been burning for 0.5 hours.

User-menu

All of the measured values, operating times and limiting values that are relevant for the user can be set and read in this menu.

A press on the menu-key brings you to this menu. Each further press on the menu-key moves you further from one menu prompt to the next.

Settings can be changed with the arrow keys. When you confirm a value by pressing the Enter-key, you are taken to the next menu prompt. Settings can only be made when the system control has been previously unlocked.

To simplify changing settings, a press on the UV-key allows you to select a certain individual number in the numerical value that you wish to change. The arrow-keys can then be used to enter the wanted number from 0 to 9 at the selected position.

A minimum and a maximum measured value are fixed in the programme for all three measuring cells for conductivity and the temperature sensor. Should measured values be below or above these values respectively, then it must be assumed that there is a cable break. In such a case, the appropriate fault message "Measuring cell LF1", "Measuring cell LF2", "Measuring cell LF3" or "Measuring cell Temp." is displayed in line 4.

12.1 Menu

12.1.1 Feedwater conductivity

After a single press on the menu-key, the feedwater conductivity can be read and the limiting value of the feedwater conductivity can be set. The fault message that flashes in the fourth line of the display when the feedwater limiting value is exceeded is "*Limit value feed*" (Measuring point LF2).

Measuring range, feedwater: 10.0- 0.010 MΩxcm
Setting range, limiting value: 0.1- 50.0 μS/cm
Basic setting: 0.50 MΩxcm

With settings higher than 50 μS/cm, the limiting value is switched off and the word "*Off*" is shown in the display.

The display shows:

<p>Feedwater 1.25 MΩxcm Limit value feed 2,0 μS/cm</p>
--

12.1.2. Ultrapure water limiting value:

After a second press on the menu-key, the fault display for the ultrapure water limiting value and the ultrapure water limiting value can be set. As soon as the fault display is switched on, the fault is displayed both in Stand-by mode and Production mode. When the fault display is switched off, the fault is only displayed in Production mode. When the entered limiting value is exceeded, "*Lim. val.pure w.*" is displayed.

Measuring range, ultrapure water: 0.1000 MΩxcm
Setting range, limiting value: 0.055- 5.000 μS/cm
Basic setting: 10.0 MΩxcm
Basic setting, fault suppression: On

With settings higher than 5.000 μS/cm, the limiting value is switched off and the word "*Off*" is shown in the display.

The display shows:

<p>Fault message Stand-by On Lim. val. pure w. 0.100 μS/cm</p>
--

12.1.3. UV-Lamp operating time and intensity:

Not active in this version.

The display shows:

UV-time
0000 h
UV-intensity
0%

12.1.4. Filter cartridge operating time counter:

The operating time counter for the filter cartridge can be set in this menu by a fourth press on the menu-key and the entry of a valid serial number for the filter cartridge.

The display shows:

Ser. no.:
cartridge
Press enter
-----/--

12.1.5. Rinsing

A fifth press on the menu key in this menu allows rinsing to be carried out if this is necessary. Triggering is made by confirming the requirement with a press on the Enter-key. The pump is started and the rinsing solenoid valve is opened for the rinsing time period set in the OEM-menu.

The count-down of the rinsing time is displayed during rinsing.

When rinsing has finished, the system returns to the last operating mode (Interval or Non-stop).

The display shows:

Rinse ?
Press enter

During rinsing, the display shows:

Rinse
30 sec.

12.1.6. Disinfection

A sixth press on the menu-key gives you the possibility of carrying out disinfection. The command "*Disinfection cartridge. Install one*" is shown when this menu-prompt is confirmed with Enter. After confirming this with Enter, disinfection is carried out. The pump runs for the disinfection time that has been set in the OEM-menu. When half of the disinfection time has passed, the rinsing solenoid valve opens and stays open up to the end of the disinfection process. The "*New filter cartridge. Install one*" message is given when the disinfection process has finished

The system returns to the last operating mode when this is confirmed with Enter.

A count-down of the disinfection time is shown in the display during disinfection.

The display shows:

Disinfection
Press enter

After confirmation with Enter, the display shows:

Disinfection
cartridge
Press enter

During disinfection, the display shows:

Disinfection
25 min.

After disinfection, the display shows:

New
filterset
Press enter

12.1.7 Display of fault storage:

A seventh press on the menu-key calls the fault storage. Confirmation with Enter allows you to look through the faults in the fault storage.

Should several faults have occurred, then two faults, each with date and time, are shown in the display. Appropriate pressing of the arrow-keys brings previous and subsequent faults to display.

A press on the menu-key or the Enter-key returns the display to the last operating mode.

The display shows:

Error history
Press enter

The fault storage display shows:

14.03.04 14.30
Limit value feed
14.03.04 15.30
Lim. value pure w.

12.1.8 Data print out

Not active in this version.

The display shows:

12.1.9 Unlocking the system

An nine press on the menu-key in this menu brings you to the "Code" menu. To prevent unauthorized access to the settings in the system control, changes to the settings can only be carried out when a correct code from the Assignment Table that follows is entered and confirmed with the Enter-key.

Unlocking remains active for 5 minutes.

Each access via the code is issued to the printer (RS 232) complete with date, time and abbreviated code number ("Code 0001" corresponds to code 150, "Code 0002" to code 250 etc.).

The display shows:

Code numbers can be assigned to individual persons in the Assignment Table on the following page. Please remove this page from the Operating Instructions and store it where it is safe from unauthorized viewing.

Assignment Table for code numbers which unlock the system

Code no.	Printer output	Person
150	0001	
250	0002	
350	0003	
450	0004	
550	0005	
650	0006	
750	0007	
850	0008	
950	0009	

12.2 OEM Menu:

Basic settings and limiting values can be changed in this menu.
To make changes in the OEM menu, system control must previously be unlocked.

Calling the OEM menu:

Simultaneous pressing of the Interval-key and the Nonstop-key calls the OEM menu. Following this, the prompt "OEM menu Press Enter" appears. When this is confirmed with the Enter-key, the first menu prompt can be worked on. To simplify changing settings, press the UV-key to select the individual number in a numerical value which you want to change. Now use the arrow keys to enter the wanted number from 0 to 9 at that selected position. A press on the menu-key takes you to the next menu prompt.

The OEM menu call display shows:

12.2.1 Setting the limiting temperature for the system:

The maximum temperature which the system is to be allowed to reach can be set in this menu. The "*max. Temperature*" fault message is triggered when this temperature is exceeded.

It is shown in the 4th line of the display.

Basic setting: 50 °C
Setting range: 1 - 50 °C

The display shows:

12.2.2 Setting the rinsing time:

Basic setting: 30 sec.
Setting range: 10 - 60 sec.

The display shows:

OEM-Menu
Rinse time
30 sec.

12.2.3 Changing the disinfection time:

Basic setting: 30 min.
Setting range: 15 - 90 min.

The OEM menu prompt C display shows:

OEM-Menu
Disinfect. time
30 min.

12.2.4 Setting the interval time for the pump:

Basic setting: 5 min.
Setting range: 1 - 30 min.

The display shows:

OEM-Menu
Pump interval
5 min.

12.2.5 Setting the interval rinse time:

Basic setting: 0.5 sec.
Setting range: 0.1 - 2 sec.

The display shows:

OEM-Menu
Rinse interval
0.5 sec.

12.2.6 Setting the real-time clock:

Basic setting: The actual date
Setting range: 1 - 12 Months, 1 - 31 Days, 0 - 24 h, 0 - 60 min.

The display shows:

OEM-Menu
Day 30 Month 12
Year 2009
Hour 12 min.30

12.2.7 Setting the sending interval:

Not active in this version.

The display shows:

OEM-Menu
Send interval
1 h

12.2.8 Selecting the language:

Basic setting: English
Setting range: English, French, German

The display shows:

**12.2.9 Switching units:**

Basic setting: Resistance MΩxcm
Setting range: Resistance MΩxcm,
Specific electrical resistance MΩxcm

The display shows:

**12.2.10 Switching temperature compensation on/off:**

Basic setting: on
Setting range: on, off

The display shows:

13. Maintenance

Regular maintenance of your system ensures that the value of it is maintained. We recommend that you close a service contract with a service company which has been expressly authorized. You then have the certainty of a high operational safety and reliability.

NOTE!

To ensure that system will work reliably for a long time, it must be checked, serviced and cared for at regular time intervals in accordance with these operating instructions! For this reason, the operating instructions must be readily available to operating and maintenance staff at all times, and be carefully followed!

Any maintenance work which should become necessary during the validity of the guarantee is only to be carried out by an expressly authorized service company.

The operating-staff assigned is committed to carry out the weekly checks. During the agreed term of validity of the guarantee, the maintenance record sheet supplied in the operating instructions should be properly kept by entry of the results of weekly checks.

CAUTION!

For perfect functioning to be ensured, the ultrafiltration membrane should be replaced every 2 years, or as soon as a drop in performance is determined.

Cleaning and disinfection of your system is performed for reasons of hygiene and has no effect on the technical condition of the system. The system must be cleaned and disinfected at least once yearly.

Control and maintenance work on electrical systems is only to be carried out when the system has been switched to a currentless condition at the mains and the switching off has been secured against inadvertent switching back on. Such work is only to be performed by appropriately trained, skilled electricians.

13.1 Maintenance intervals

Consumable materials are to be replaced at the intervals given in the following Table or when there is a drop in performance:

Material	Flow chart no.	Article no.	Interval*
Filter cartridge	A-F1	09.1006	12 Months
Sterile filter	A-F2	09.1003	12 Months
Ultrafiltration membrane	A-F3	22.0089	24 Months ¹

*Please keep in mind that the life of your consumables is directly dependent on the quality of the feed water and the amount of water used daily. The interval is contingent on the feedwater quality so that a shorter one may be necessary.

13.2 Replacing the filter cartridge

The filter cartridge must be replaced when the limiting value which you have set for the ultrapure water is exceeded. It must also be replaced after disinfection of the system.

Replace the filter cartridge with a new one as follows:

1. Switch the system off.
2. Unplug the mains plug to separate the system from the mains.
3. Turn off the supply of feedwater to the system.
4. Open the dispensing valve, wait until water no longer flows out, then close it again.
5. Remove the cartridge cover.
6. Take the quick connects off of the feedwater inlet and purified water outlet of the filter cartridge. Close the connectors with the stoppers that you have kept for later use.
7. Draw the spent filter cartridge out of the guide and replace it with the new one.
8. Remove the stoppers from the new filter cartridge and save then for future use.
9. Fit the quick connects to the new cartridge inlet and outlet so that they audibly lock in position.
10. Re-open the supply of feedwater.
11. Reconnect the system to the mains.
12. Switch the system on. Check all connections for leaks.
13. Fit the cartridge cover back on.
14. Run off and discard at least 5 litres of water.

Schnellverschlüsse Filterkartuschen
Quick connectors filter cartridges

It may only be prescribed for this unit specifically tailored filter cartridge No. 09.1006 be used. Apart from that the guarantee goes out.

Switch the system to the Rinsing operating mode to vent the system.

13.3 Disinfection

Disinfection should be regularly carried out, at the latest when the filter cartridge is to be replaced.
Your system should be cleaned and disinfected at least once a year to eliminate any bacteria that are possibly in the system. We recommend that you carry out cleaning and disinfection shortly prior to the time that the filter cartridge is to be replaced.

A disinfection cartridge, article no. 09.1102, is required for disinfection of your system.

Use cleaning solutions as follows:

MICRO-Chlor Granulate, 1 box, article no. 09.2202 (Europe only)

Cleaning Solution, 1 syringe, article no. CMX 25 (US-market only).

Please observe the information given in the safety data sheet supplied with Micro-Chlor disinfectant to avoid possible health hazards!

Proceed as follows to disinfect your system:

1. Switch the Micro-/ MicroPure system off.
2. Shut off the supply of feedwater to the system and open the dispensing valve so that pressure in the system is completely released.
3. Remove the filter cartridge (as under "Changing the filter cartridge" in the Operating Instructions for the system).
4. Unscrew the stopper from the disinfectant cartridge, fill the cartridge with water then empty the contents of a box respectively a syringe of the cleaning solution into the water.
Important! For effective disinfection the cartridge must be completely filled with water.
5. Screw the stopper back on the disinfectant cartridge. Connect the cartridge in the system (as detailed under "Changing the filter cartridge" in the Operating Instructions for the system).
6. Re-open the feedwater supply.
7. Switch the system on and select the "Disinfection" prompt in the menu. The disinfection programme is finished after approx. 30 minutes.
8. Switch the system off.
9. Shut off the supply of feedwater to the system.
10. Remove the disinfectant cartridge (as under "Changing the filter cartridge" in the Operating Instructions for the system).
11. Connect the new filter cartridge in the system (as under "Changing the filter cartridge" in the Operating Instructions for the system).

Before dispensing water from the system, let water run out for approx. 15 minutes. The system is then ready for use.

14. Waste disposal

When the packaging is no longer needed, it can be disposed of as household waste.

Systems are in conformity with EEC Guideline 2002/95/EC

The system is not to be thrown away as household waste but must be properly disposed of. It can be returned to the manufacturer for safe disposal according to EEC Guideline 2002/96/EC. We therefore request our customers in Germany and other member States in the European Economic Area to contact our local service centre or our headquarters:

Thermo Electron LED GmbH
Stockland 3
56412 Niederelbert, Germany

WEEE-Reg.-no.: DE 12471402

In countries outside of the European Economic Area, please contact your local authorities or waste disposal company.

15. Trouble shooting

Fault	Cause	Remedy
The system does not start	<ul style="list-style-type: none"> - No supply of power 	<ul style="list-style-type: none"> - Provide power
Dispensing not possible	<ul style="list-style-type: none"> - Feedwater tap is closed - Feedwater and rinse water connections are mixed up - Feedwater pressure < 0.1 bar 	<ul style="list-style-type: none"> - Open the feedwater tap - Correct the connections - Increase feedwater pressure
Resistance < 18.2 MΩxcm	<ul style="list-style-type: none"> - System has a UF-module (higher conductivity possible) - Ion exchange capacity is exhausted 	<ul style="list-style-type: none"> - Replace filter cartridge with a new one
System control no longer reacts	<ul style="list-style-type: none"> - Improper operation 	<ul style="list-style-type: none"> - Unplug the mains plug for 5 seconds
Water flows out	<ul style="list-style-type: none"> - Leaky hose connection - Feedwater pressure > 6 bar 	<ul style="list-style-type: none"> - Check and seal the hose connection - Install a pressure reducer
Dispensed amount is too small	<ul style="list-style-type: none"> - UF-Module blocked - Pre-pressure too low - Internal pressure too low 	<ul style="list-style-type: none"> - Replace UF-module - Increase pre-pressure - Readjust pressure reducer
Wrong time or date	<ul style="list-style-type: none"> - Time zone - Summer/winter time 	<ul style="list-style-type: none"> - Reset time and date
Wrong language	<ul style="list-style-type: none"> - Wrong language set 	<ul style="list-style-type: none"> - Correct the language setting
Fault message: <i>"Limit value feed"</i>	<ul style="list-style-type: none"> - Feedwater conductivity too high - Limiting value set too low 	<ul style="list-style-type: none"> - Check the pretreatment - Check and suit the limiting value setting

Fault message: <i>"Lim. va.pure w."</i>	<ul style="list-style-type: none"> - Filter cartridge exhausted - Limiting value set too low - System has a UF-module (higher conductivity possible) 	<ul style="list-style-type: none"> - Replace with new filter cartridge (art.-no.: 09.2005) - Check and suit the limiting value
Fault message: <i>"UV-time"</i>	<ul style="list-style-type: none"> - UV-Lamp operating time has been exceeded 	<ul style="list-style-type: none"> - Replace the UV-lamp (art.-no. 09.2002) and set the operating time counter back
Fault message: <i>"UV-intensity"</i>	<ul style="list-style-type: none"> - UV-Lamp intensity no longer sufficient - UV-Sensor is dirty - Limiting value set too low 	<ul style="list-style-type: none"> - Replace and measure in a new UV-lamp - Clean the UV-sensor - Check and suit the limiting value
Fault message: <i>"max.Temperature"</i>	<ul style="list-style-type: none"> - The temperature in the system is too high - Interval pump time too long - Limiting value set too low - Feedwater temperature is too high 	<ul style="list-style-type: none"> - Reduce the temperature by running water off - Reduce interval pump time - Check and suit the limiting value - Reduce the feedwater temperature
Fault message: <i>"Measuring cell LF1"</i>	<ul style="list-style-type: none"> - Measuring cell cable break - System control defect - Conductivity of ultrapure water outside of the measuring range 	<ul style="list-style-type: none"> - Replace the measuring cell - Replace system control - see "Resistance < 18.2 μS/cm"
Fault message: <i>"Measuring cell LF2"</i>	<ul style="list-style-type: none"> - Measuring cell cable break - System control defect - Feedwater conductivity outside of measuring range 	<ul style="list-style-type: none"> - Replace the measuring cell - Replace system control - see "Limit value.feed"
Fault message: <i>"Measuring cell LF3"</i>	<ul style="list-style-type: none"> - Measuring cell cable break - System control defect 	<ul style="list-style-type: none"> - Replace the measuring cell - Replace system control
Fault message: <i>"Measuring cell Temp."</i>	<ul style="list-style-type: none"> - Measuring cell cable break - System control defect 	<ul style="list-style-type: none"> - Replace the measuring cell - Replace system control
Fault message: <i>"New Filter cartridge"</i>	<ul style="list-style-type: none"> - Filter cartridge operating time has expired 	<ul style="list-style-type: none"> - Replace with new filter cartridge (art.-no.: 09.1006)
